

1.4 Objectives

1.4.1 General Objective

The general objective is to develop a secure and user-friendly Hostel Management System for Quaid-i-Azam University.

1.4.2 Specific Objectives

The system will:

1. Digitize hostel applications.
 2. Maintain student records in a centralized database.
 3. Track room and bed availability.
 4. Prevent duplicate bed allotments.
 5. Allow students to track application status.
 6. Provide renewal-request functionality.
 7. Improve complaint handling.
 8. Maintain hostel fee records.
 9. Publish notices online.
 10. Generate useful reports for hostel administration.
 11. Reduce paperwork.
 12. Improve transparency and record accuracy.
-

1.5 Scope of the Project

The first version of the system will include the following modules:

1.5.1 Student Module

The student module will allow students to:

- Log in
- Update permitted profile information
- Submit a hostel application
- Track application status
- Submit a renewal request
- View allotment details
- Lodge a complaint
- View complaint status
- View notices
- Check hostel fee status

1.5.2 Hostel Administration Module

The hostel administration module will allow authorized staff to:

- Review applications
- Verify student information
- Approve or reject applications
- Manage hostels
- Manage rooms
- Manage beds
- Allocate beds
- Update allotment records
- Process renewal requests
- Handle complaints
- Verify payments
- Publish notices
- Generate reports

1.5.3 Visitor Management Module

The visitor module will allow security staff to:

- Record visitor details
- Record entry time
- Record exit time
- Search visitor history
- Link visitors with hostel residents

1.5.4 Features Outside the Initial Scope

The following features may be added later:

- Biometric attendance
- Smart-card access
- Mobile application
- Mess billing
- Online payment gateway
- QR-based visitor passes
- Inventory management

CHAPTER 2

SOFTWARE REQUIREMENTS SPECIFICATION

2.0 Software Requirements Specification

This chapter defines the requirements of the proposed Hostel Management System for Quaid-i-Azam University. It explains the system scope, functional requirements, non-functional requirements, constraints, major inputs and outputs, use cases, sequence diagrams, domain model and Entity-Relationship Diagram.

The purpose of the Software Requirements Specification is to provide a clear description of the expected behavior of the system before development begins.

2.1 Introduction

The Hostel Management System is a web-based application designed to manage university hostel activities through a centralized platform. It will help students, hostel staff, wardens, security staff and administrators perform their tasks efficiently.

The system will allow students to submit hostel applications, check status, request renewal, submit complaints and view notices. Authorized staff members will manage hostels, rooms, beds, allotments, payments, complaints, visitors and reports.

The software will reduce paperwork and provide accurate records for decision-making.

2.2 Scope

The system will cover the following areas:

- Student login and profile management
- New hostel applications
- Existing-student renewal requests
- Application-status tracking
- Application review and approval
- Hostel, room and bed management
- Room and bed allotment
- Transfer requests
- Complaint submission
- Complaint-status updates
- Fee-status management
- Visitor entry and exit records
- Notice publication
- Administrative reports
- Audit logs

The system will not replace university hostel policies. Authorized university staff will continue to make final decisions.
