Renewal Service

Document type: Proposed service specification

Purpose

Manages requests to extend a student existing hostel accommodation.

Main responsibilities

• Create request

• check eligibility

• record decisions/status

• extend period only after required approval

• expose progress.

Typical inputs

Student/allotment reference, requested period and supporting details.

Typical outputs

Renewal request/status or updated accommodation period/error.

Proposed business and validation rules

• Reference a valid allotment

• follow policy/date rules

• never extend without required approval.

Important implementation note

This PDF is a proposed draft based on the service name and common hostel-management workflows. The original Markdown file contains only a short heading/name, so the responsibilities, inputs, outputs and rules are not verified against implemented code. Before treating this as final SRS documentation, reconcile it with approved requirements, ERD/database schema, project policies and actual service implementation.
