Report Service

Document type: Proposed service specification

Purpose

Produces operational summaries from hostel-management records for authorized users.

Main responsibilities

• Retrieve report data

• apply filters/date ranges

• calculate totals consistently

• enforce permissions

• handle empty results.

Typical inputs

Report type, filters/date range and requester permissions.

Typical outputs

Report data/export if supported, or validation/authorization error.

Proposed business and validation rules

• Agree report definitions with requirements

• limit sensitive data

• match export formats to implementation.

Important implementation note

This PDF is a proposed draft based on the service name and common hostel-management workflows. The original Markdown file contains only a short heading/name, so the responsibilities, inputs, outputs and rules are not verified against implemented code. Before treating this as final SRS documentation, reconcile it with approved requirements, ERD/database schema, project policies and actual service implementation.
