Renewal Request Model

Software Requirements / Logical Data Model

1. Purpose

Represents a request by an existing resident to extend hostel accommodation.

2. Responsibilities

• Capture a renewal request linked to the resident/student.

• Track the request's submission and decision state.

• Allow authorized staff to review requests and update the outcome.

3. Proposed Logical Attributes

The following is a documentation proposal, not a claim that every field is already implemented. Confirm exact field names, types, constraints and cardinalities against the project ERD/database schema.

Attribute	Meaning / Requirement
renewal_request_id	Unique identifier for the request.
student_id	Reference to the requesting student.
allotment_id	Reference to the current or relevant allotment, if included in the schema.
requested_until	Requested extension date or period, if collected.
status	Submitted, under review, approved, rejected or other defined state.
reviewed_by / reviewed_at	Decision metadata, if recorded.

4. Relationships

• A renewal request belongs to a student.

• It may reference an existing allotment.

• A renewal decision may affect the duration/status of an allotment.

5. Validation and Business Rules

• Only eligible residents should be able to request renewal according to policy.

• Only authorized staff should approve or reject a renewal.

• An approved renewal should update the relevant accommodation period consistently.

• The system should retain the decision and avoid conflicting date ranges.

6. Traceability / Notes

The project scope includes renewal-request functionality; eligibility windows and renewal policy must be supplied by the institution.

Status: Draft for review. Align this document with the approved SRS, ERD, class diagram, and institutional policies before treating it as final.
