Visitor Model

Software Requirements / Logical Data Model

1. Purpose

Represents a visitor entry associated with a hostel resident or visit purpose.

2. Responsibilities

• Record visitor identity/details needed for hostel security.

• Record entry and exit times when available.

• Support searching visitor history and linking a visitor to a resident.

3. Proposed Logical Attributes

The following is a documentation proposal, not a claim that every field is already implemented. Confirm exact field names, types, constraints and cardinalities against the project ERD/database schema.

Attribute	Meaning / Requirement
visitor_record_id	Unique identifier for the visit record.
visitor_name	Visitor's recorded name.
identity_or_contact_details	Minimum details required by visitor policy.
student_id_or_resident_reference	Resident being visited, where applicable.
entry_time	Recorded time of entry.
exit_time	Recorded time of exit, when the visitor leaves.
recorded_by	Security staff/account reference, if recorded.

4. Relationships

• A visit record may link to a student/resident.

• Entry/exit actions may be associated with security staff accounts.

• Visitor records may be queried for history and audit purposes.

5. Validation and Business Rules

• Record entry time and, when applicable, exit time.

• Validate that exit time is not earlier than entry time.

• Restrict visitor history to authorized staff and permitted users.

• Collect only visitor information required by the institution's policy.

6. Traceability / Notes

Visitor management is explicitly included in the project scope and has supporting activity/sequence diagrams.

Status: Draft for review. Align this document with the approved SRS, ERD, class diagram, and institutional policies before treating it as final.
