Complaint Service

Document type: Proposed service specification

Purpose

Manages complaints from submission through assignment, status updates and resolution.

Main responsibilities

• Create complaint

• assign/update/resolve with permissions

• track status and timestamps

• show progress to permitted users.

Typical inputs

Submitter, category/description, location and optional attachment reference.

Typical outputs

Complaint record/status or validation/authorization error.

Proposed business and validation rules

• Validate required fields

• protect complaint privacy

• validate attachments under approved upload policy.

Important implementation note

This PDF is a proposed draft based on the service name and common hostel-management workflows. The original Markdown file contains only a short heading/name, so the responsibilities, inputs, outputs and rules are not verified against implemented code. Before treating this as final SRS documentation, reconcile it with approved requirements, ERD/database schema, project policies and actual service implementation.
