Hostel Management Service

Document type: Proposed service specification

Purpose

Maintains hostel-level records and supports authorized updates.

Main responsibilities

• Create/retrieve/update/deactivate hostel records

• validate details and capacity

• provide data to related workflows

• prevent conflicts.

Typical inputs

Hostel identifier and schema-defined hostel fields.

Typical outputs

Hostel record/update or validation/authorization/conflict error.

Proposed business and validation rules

• Match approved database schema

• keep capacity consistent with inventory

• restrict changes to authorized staff.

Important implementation note

This PDF is a proposed draft based on the service name and common hostel-management workflows. The original Markdown file contains only a short heading/name, so the responsibilities, inputs, outputs and rules are not verified against implemented code. Before treating this as final SRS documentation, reconcile it with approved requirements, ERD/database schema, project policies and actual service implementation.
