Notice Management Service

Document type: Proposed service specification

Purpose

Creates and manages notices for students or staff.

Main responsibilities

• Create notice

• publish/update/archive

• retrieve active notices for intended audience

• validate content and dates.

Typical inputs

Title/content, audience, author and optional publication/expiry dates.

Typical outputs

Saved/published notice or validation/authorization error.

Proposed business and validation rules

• Only authorized roles publish

• handle expired notices per policy

• validate uploaded media if supported.

Important implementation note

This PDF is a proposed draft based on the service name and common hostel-management workflows. The original Markdown file contains only a short heading/name, so the responsibilities, inputs, outputs and rules are not verified against implemented code. Before treating this as final SRS documentation, reconcile it with approved requirements, ERD/database schema, project policies and actual service implementation.
