Visitor Management Service

Document type: Proposed service specification

Purpose

Records and manages visits under hostel entry policy.

Main responsibilities

• Register visitor/visit

• link to host student/hostel

• record check-in/out if supported

• restrict access

• validate status transitions.

Typical inputs

Visitor details, host/student reference, visit time and applicable action.

Typical outputs

Visitor/visit record/status or validation/authorization error.

Proposed business and validation rules

• Collect only required information

• restrict access/retention

• match visitor fields and statuses to schema.

Important implementation note

This PDF is a proposed draft based on the service name and common hostel-management workflows. The original Markdown file contains only a short heading/name, so the responsibilities, inputs, outputs and rules are not verified against implemented code. Before treating this as final SRS documentation, reconcile it with approved requirements, ERD/database schema, project policies and actual service implementation.
