Hostel Application Service

Document type: Proposed service specification

Purpose

Handles the application submission lifecycle for students seeking accommodation.

Main responsibilities

• Create application

• validate fields

• assign reference/initial status

• support permitted correction or withdrawal

• connect to review/tracking.

Typical inputs

Student reference, accommodation preferences, required details and document references.

Typical outputs

Submitted application/reference/status or workflow error.

Proposed business and validation rules

• Follow approved duplicate/submission rules

• protect personal details

• submission is not approval or allotment.

Important implementation note

This PDF is a proposed draft based on the service name and common hostel-management workflows. The original Markdown file contains only a short heading/name, so the responsibilities, inputs, outputs and rules are not verified against implemented code. Before treating this as final SRS documentation, reconcile it with approved requirements, ERD/database schema, project policies and actual service implementation.
