Complaint Model

Software Requirements / Logical Data Model

1. Purpose

Represents a complaint submitted by a student/resident about a hostel-related issue.

2. Responsibilities

• Capture the complaint description and submission metadata.

• Track progress and resolution status.

• Support authorized staff in reviewing, assigning and resolving complaints.

3. Proposed Logical Attributes

The following is a documentation proposal, not a claim that every field is already implemented. Confirm exact field names, types, constraints and cardinalities against the project ERD/database schema.

Attribute	Meaning / Requirement
complaint_id	Unique complaint identifier.
student_id	Reference to the submitting student, where complaints are student-linked.
category	Issue category, if supported.
description	Complaint details.
submitted_at	Submission date/time, if recorded.
status	Workflow state such as submitted, in progress, resolved or closed.
resolution_notes	Optional resolution details.
resolved_at	Resolution timestamp, if tracked.

4. Relationships

• A complaint is associated with its submitter.

• A complaint may be handled by an authorized staff member if assignment is supported.

• Complaint status and history may be used for reports and audit records.

5. Validation and Business Rules

• A complaint must have a valid submitter and non-empty description where required.

• Students should see only complaints they are authorized to access.

• Status changes should follow defined workflow rules.

• Sensitive complaint content should be accessible only to authorized roles.

6. Traceability / Notes

Complaint-management activity and sequence diagrams are present in the project design; align workflow states with those artifacts.

Status: Draft for review. Align this document with the approved SRS, ERD, class diagram, and institutional policies before treating it as final.
