Allotment Service

Document type: Proposed service specification

Purpose

Assigns an eligible student to an available room or bed and records the allotment.

Main responsibilities

• Check eligibility

• verify availability

• create/update allotment status

• support authorized release or cancellation.

Typical inputs

Student/application reference, room/bed, date, authorized action.

Typical outputs

Allotment record/status or validation error.

Proposed business and validation rules

• Do not allocate an unavailable bed

• prevent overlapping active allotments

• record authorized changes.

Important implementation note

This PDF is a proposed draft based on the service name and common hostel-management workflows. The original Markdown file contains only a short heading/name, so the responsibilities, inputs, outputs and rules are not verified against implemented code. Before treating this as final SRS documentation, reconcile it with approved requirements, ERD/database schema, project policies and actual service implementation.
