Hostel Model

Software Requirements / Logical Data Model

1. Purpose

Represents a hostel or residential facility managed by the university.

2. Responsibilities

• Store the hostel’s identifying information.

• Provide a parent entity for rooms and related operational records.

• Support administrative management and reporting of hostel facilities.

3. Proposed Logical Attributes

The following is a documentation proposal, not a claim that every field is already implemented. Confirm exact field names, types, constraints and cardinalities against the project ERD/database schema.

Attribute	Meaning / Requirement
hostel_id	Unique identifier for a hostel.
name	Official hostel name or code.
location_or_address	Location information, if maintained.
capacity	Total or configured accommodation capacity, if tracked.
status	Operational status, if supported.
description / contact	Optional descriptive or contact information.

4. Relationships

• A hostel may contain multiple rooms.

• Beds may be associated with a room and thereby with a hostel.

• Hostel records may be referenced by allotment and reporting processes.

5. Validation and Business Rules

• Hostel identifiers should be unique.

• Only authorized administrators should create, edit or deactivate hostel records.

• Capacity reports should use a consistent definition and avoid counting unavailable or duplicate beds incorrectly.

• A hostel with dependent room records should not be hard-deleted without a defined data-retention policy.

6. Traceability / Notes

Capacity, status and contact fields are proposed logical fields; confirm the final schema against the ERD.

Status: Draft for review. Align this document with the approved SRS, ERD, class diagram, and institutional policies before treating it as final.
