Application Review Service

Document type: Proposed service specification

Purpose

Supports staff review of hostel applications and records decisions.

Main responsibilities

• Retrieve application

• validate required information

• record decision and reviewer remarks

• enforce review permissions.

Typical inputs

Application reference, reviewer, decision, comments.

Typical outputs

Updated application status or validation/authorization error.

Proposed business and validation rules

• Only authorized reviewers decide

• follow approved status transitions

• preserve decision history where required.

Important implementation note

This PDF is a proposed draft based on the service name and common hostel-management workflows. The original Markdown file contains only a short heading/name, so the responsibilities, inputs, outputs and rules are not verified against implemented code. Before treating this as final SRS documentation, reconcile it with approved requirements, ERD/database schema, project policies and actual service implementation.
