Audit Log Service

Document type: Proposed service specification

Purpose

Records important actions for later review and accountability.

Main responsibilities

• Capture relevant events

• associate actor, timestamp, action and affected record

• allow authorized retrieval

• protect records.

Typical inputs

Event, actor, affected record, timestamp, permitted metadata.

Typical outputs

Stored audit entry or controlled error.

Proposed business and validation rules

• Never log passwords or secrets

• restrict access

• define event coverage and retention according to policy.

Important implementation note

This PDF is a proposed draft based on the service name and common hostel-management workflows. The original Markdown file contains only a short heading/name, so the responsibilities, inputs, outputs and rules are not verified against implemented code. Before treating this as final SRS documentation, reconcile it with approved requirements, ERD/database schema, project policies and actual service implementation.
