Fee Management Service

Document type: Proposed service specification

Purpose

Supports fee assessment and tracking of payment obligations and recorded payments.

Main responsibilities

• Retrieve configured fees

• calculate/retrieve balance

• record validated payments

• track status

• provide authorized summaries.

Typical inputs

Student/allotment, fee period/type, amount and payment reference/date.

Typical outputs

Fee balance/status, payment record or validation error.

Proposed business and validation rules

• Use consistent money precision

• prevent duplicate transaction references

• align payment confirmation with actual design.

Important implementation note

This PDF is a proposed draft based on the service name and common hostel-management workflows. The original Markdown file contains only a short heading/name, so the responsibilities, inputs, outputs and rules are not verified against implemented code. Before treating this as final SRS documentation, reconcile it with approved requirements, ERD/database schema, project policies and actual service implementation.
