Transfer Service

Document type: Proposed service specification

Purpose

Handles authorized moves from a student current room or bed to another.

Main responsibilities

• Capture source and destination

• check destination availability

• apply after approval

• keep allotment records consistent

• record history if supported.

Typical inputs

Student/current allotment, destination room/bed, effective date and approval.

Typical outputs

Transfer result and updated accommodation or validation/workflow error.

Proposed business and validation rules

• Avoid overlapping active allotments

• check destination capacity/eligibility

• follow approved approval process.

Important implementation note

This PDF is a proposed draft based on the service name and common hostel-management workflows. The original Markdown file contains only a short heading/name, so the responsibilities, inputs, outputs and rules are not verified against implemented code. Before treating this as final SRS documentation, reconcile it with approved requirements, ERD/database schema, project policies and actual service implementation.
